

Killtech Pharmaceuticals Research Results For the Study on a Cure for Dave's Syndrome.

The following report details the results of the study to find a cure for the condition Known as Dave's Syndrome.

1. The Summary

Dave's syndrome is a condition where, at the point the inflicted person reaches 85 degrees Ferin height they begin to exhibit unusual symptoms. The onset takes around two years from initial symptom to final stages.

Final stages include:

- Intermittent Catatonic state
- Uncontrollable urge to act like a cave man upon release of catatonic state.

2. The problem

Are we able to prevent the development of the condition, and reverse the symptoms even in late stages?

3. Research

Phases 1 and 2 focused predominantly on early stage Dave's Syndrome participants. A total of 6,000 participants were involved in phase 1, with a further 12,000 in phase 2. Results for early stage is good, phase 3 will focus on later stage sufferers.

4. HYPOTHESIS

If this trial is successful, then participants will see a marked improvement on their current situation. Symptoms will become controllable.

5. Procedures

The trial uses a double-blind study, with neither participants, nor research doctors will know who has taken the placebo. The trial will use an inhouse study so as to control the admission of the drugs, and check for any side effects.

6. Results and Observations

Observations show positive results, with all late stage participants showing some amount of improvement, and 98% showing full recovery.

One participant, ID 6258, died prior to the study starting.

7. Analysis and Post Lab questions

- a) How successful is the drug on late stage participants?

The study showed great results, with a 98% success across all age groups, further bolstering the results from the initial phases.

- b) What side effects does the drug have? And are they better or worse than living with the condition.

Side effects were minimal, with 2% experiencing them. Side effects include the random urge to quack like a duck, although participants state that this is still better than the syndrome.
